SUMMARY

Data Analyst with hands-on experience in data cleaning, exploratory analysis, dashboard development, and automated analytics workflows through a 6-month industry internship and multiple end-to-end projects. Skilled in transforming raw datasets into actionable business insights using Python, SQL, Excel, and Power BI. Experienced in ETL processes, KPI reporting, and predictive modeling with basic machine learning techniques. Strong focus on data accuracy, reporting automation, and decision-support analytics.

SKILLS

Programming & Databases: Python (Pandas, NumPy, Matplotlib, Seaborn, Scikit-learn), SQL (MySQL, Joins, Subqueries, CTEs, Window Functions, Query Optimization, Indexing)
Data Analysis & BI: Data Cleaning, Exploratory Data Analysis (EDA), Statistical Analysis, ETL Pipelines, KPI & Stakeholder Reporting, Dashboarding (Power BI, Excel)
Machine Learning & Automation: Predictive Modeling (Regression, Classification), NLP (TF-IDF), Automated Data Pipelines (n8n, Papermill, APIs)
Tools & Platforms: Git, Jupyter Notebook, VS Code, Google Colab, Azure

EXPERIENCE

Data Analyst Intern

Ziion Technology | Mohali, Punjab | Sep 2025 - Feb 2026

- Conducted comprehensive data cleaning and exploratory data analysis (EDA) on diverse datasets, applying statistical analysis methodologies to identify key trends and anomalies, which informed subsequent modeling efforts.
- Developed and automated analytical workflows using Python and SQL, enabling efficient data extraction, transformation, and loading (ETL) processes to support regular business reporting and generate actionable insights for stakeholders.
- Wrote advanced SQL queries using joins, aggregations, subqueries, and window functions.
- Preprocessed data and performed feature engineering to train and evaluate basic supervised machine learning models, including regression and classification algorithms, demonstrating foundational predictive modeling capabilities.
- Utilized Python libraries such as Pandas and Scikit-learn for data manipulation, statistical analysis, and machine learning model development, enhancing analytical capabilities and problem-solving efficiency.

PROJECTS

Order, Delivery & Customer Analytics Dashboard | Power BI, Jupyter Notebook

- Analyzed 150,000+ order records to identify patterns in order volume, delivery delays, and customer ratings.
- Cleaned and structured raw data, resolving 1,200+ missing values and 500+ duplicate entries to ensure accuracy.
- Created 10+ basic KPIs such as total orders, average delivery time, delayed orders, and average ratings.
- Built an interactive Power BI dashboard with filters for outlet, month, and delivery time, improving data visibility by 40%.
- Discovered that average delivery delays increased by 12% during weekends, leading to actionable insights for resource planning.

Loan Approval Prediction Model | Python, Scikit-learn

- Processed and cleaned 5,000+ loan applications, handling 8 categorical and 5 numerical variables with missing values and outliers.
- Trained and tested a Support Vector Machine (SVM) model to predict loan approval status.
- Achieved 87% accuracy and 0.85 F1-score on test data, maintaining balanced precision and recall.
- Built a simple prediction flow to take user inputs and return approval results.
- Built a real-time user input prediction flow enabling instant approval results.
- Demonstrated potential for 25% faster loan triaging in simulated workflow testing.

Automated Price Monitoring & Prediction Pipeline | Python, ML, SQL, Power BI, n8n

- Scraped and cleaned pricing data for 100+ Amazon smartphone products, structuring outputs into CSV files and SQL tables.
- Designed and automated an end-to-end daily pipeline covering data collection, validation, transformation, storage, and next-day price prediction using Papermill + n8n.
- Trained and deployed XGBoost and Linear Regression models achieving 92% R^2 score for next-day price prediction accuracy.
- Eliminated manual execution, saving ~5 hours/week of human effort through automation and scheduling.
- Implemented Telegram-based monitoring alerts to track failures and pipeline health.
- Connected automated outputs to live Power BI dashboards for continuous price tracking and trend analysis, reducing manual monitoring effort by 90%.

ATS Resume Analyzer & Scoring System | Python, NLP, TF-IDF

- Processed 50+ resumes (PDF/DOCX) and extracted structured skill and section-level data using NLP preprocessing.
- Implemented a TF-IDF–based JD–resume similarity model, achieving 87% average similarity accuracy across samples.
- Built an ATS-style scoring logic ranking resumes by skills and relevance, reducing review time by 60%.
- Used in a pilot test on 10 job descriptions, providing consistent resume scoring.

EDUCATION

Govt. Degree College, Dhaliara | Himachal Pradesh

Bachelor of Computer Applications (BCA) | Jan 2022 - Jan 2025

CGPA: 7.89
